SUMMARY

QA Engineer with 3 years of experience in XR device validation, structured troubleshooting, and automation tooling. Identified **300+ system/software defects with a 50% resolution rate through cross-department collaboration**. Built Python automation tools that reduced repetitive testing effort by 65–75%, featuring one-click ADB command execution. Analyzed user issue descriptions into structured test methodologies, test plans, and edge-case test cases. Passionate about scalable test automation for Android/XR products

SKILLS

Programming & Automation: Python, ADB scripting

Testing: Regression Testing, System Validation, Bug Investigation, Log Analysis, Test Methodology Design, Test Case Authoring

Tools: ADB, Unity, VS Code, WireShark, MobSF, TestFlight, iperf (TCP/UDP)

PROFESSIONAL EXPERIENCE

Quality Test Engineer (Full-Time)

HTC Corporation | Taiwan

07/2025 – Present

- **Validation & Performance:** Conducted end-to-end validation of XR and mobile application features. Executed TCP/UDP network packet testing using iperf and Wireshark to capture and analyze network latency and throughput
 - **Structured Debugging:** Investigated and isolated software defects by reproducing issues, analyzing logs, and collaborating with developers to identify root causes
 - **Test Design & Tooling:** Authored comprehensive test plans and expanded coverage via edge-case discovery. Developed Python/Batch scripts to automate workflows and accelerate test preparation time and report generation
 - **Cross-Functional Impact:** Collaborated with Software Engineers to reproduce complex issues from business partners/edge cases; **successfully drove over 160 critical bugs to resolution by delivering traceable engineering reports**
-

Quality Test Engineer (Contractor & Intern)

HTC Corporation | Taiwan

07/2023 – 06/2025

- **Test Execution & Validation:** Executed manual testing and regression testing across XR devices to ensure software/system stability after major bug fixes
 - **Defect Tracking:** Reported and verified software or firmware issues through bug tracking workflows, providing clear reproducibility steps for development teams
 - **Environment Management:** Assisted in test environment setup, device troubleshooting, and infrastructure maintenance to support ongoing QA efforts
-

PROJECTS

Automation Testing Script (Python)

- Developed Python automation tools to achieve an intuitive GUI
- Automated Android test environment deployment (ROM flashing & ADB setup), data parsing, and log collection
- Reduced stress-test report preparation time by approximately 75%
- Minimized repetitive ADB command execution through automated scripting

VIVERSE Browser Game (PlayCanvas, JavaScript)

- **Awarded 4th Place** in an internal VIVERSE Game Hackathon Competition
- Implemented coin collection, purchasing, interactive machine, enemy AI, and event trigger systems using JavaScript
- Integrated VIVERSE no-code plugin APIs with PlayCanvas JavaScript modules
- Collaborated through iterative prototyping and gameplay refinement

VR Zombie Shooter (C#)

- **Awarded 1st Place** in University Project Competition
 - **Project Lead, Programmer, and Scene Designer**
 - Implemented core gameplay and event-driven systems in C#, designing reusable trigger logics for scene sequencing, dynamic UI transitions, and particle/audio feedback
 - Collaborated with teammates to integrate game assets and gameplay features
-

EDUCATION

B.S. Multimedia and Marketing

Jinwen University | Taiwan
